NATURAL HEPATOMODULATOR + PREBIOTIC

# BEDGEN 40® PLUS

## THE NATURAL FORMULA FOR INTELLIGENT NUTRITION

- Improves gastrointestinal health and integrity
- Strengthens the immune system at the intestinal level - Galt
- Increases energy transmitted through colostrum and milk
- Increases passive immunity received through colostrum (immunoglobulins)
- Modulates biliary liver function, increasing food digestibility while protecting the animal's body
- Maximizes the elimination of toxins
- Stimulates metabolic processes
- Increases the absorption of fat-soluble vitamins

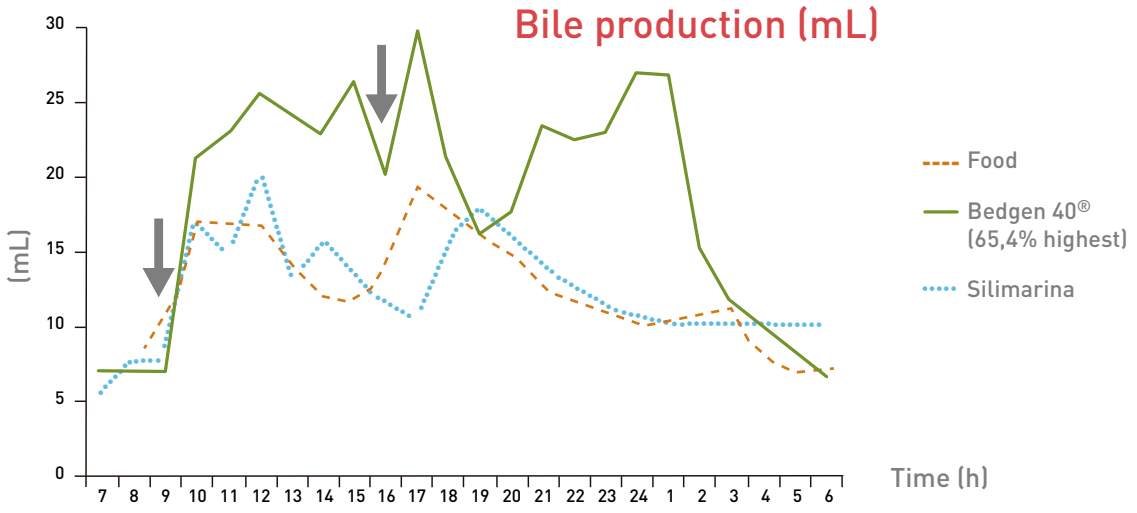
## ¿Why is bile formation necessary?

- Emulsifies and absorbs fat
- Stimulates intestinal blood flow
- Activates pancreatic lipases
- Absorbs fat-soluble vitamins (A, D, E and K)
- Excretes toxins
- Increases collagenase in the intestine



Fuente: Effect of Cynara scolymus and Silybum marianum extracts on bile production in pigs 2018; Soraci, Alejandro.

The choleretic and cholagogue effects of **BEDGEN 40® PLUS** **increase bile production by up to 60%,** improving the emulsification and hydrolysis of fats, therefore increasing the bioavailability of lipids.

#WeTakeCareOfYourAnimals

The liver has a limited physiological capacity, under extreme conditions, it works to the limit and that is when the intermediate metabolism suffers dysfunction.

Furthermore, **BEDGEN 40® PLUS** is enriched in inulin with prebiotic characteristics that stimulate the growth of the saprophytic intestinal flora (bifidobacteria and lactobacillus).

This induces beneficial physiological effects, reducing the risk of systemic and intestinal diseases. **In addition to its immune effects and on the gastrointestinal tract, it favors performance parameters such as body weight gain, feed conversion and improvement in carcass weight.**

## * SUGGESTED PROGRAM

| | GESTATION | BREAST FEEDING | WEANING | RE-BREADING, GROWTH AND TERMINATION |
|---|---|---|---|---|
| **Dose** | 150 - 300 g/tn | 150 - 300 g/tn | 5g per kg of food starter in porridge | 150 - 300 g/tn |
| **Fundamentals** | - Rut repetitions<br>+ Quantity of piglets live births<br>+ Piglet weight at born | + Milk production<br>+ Immunity<br>+ Better milk quality<br>Best weaning weight<br>< Interval: weaning - rut | - Imbalance of the intestine flora<br>+ Balance of the liver functions | + Use of food nutrients<br>+ Daily profit<br>+ Food conversion |

## BEDGEN 40® PLUS PREMIX

***DOSE** 150 g/tn of food

**PRESENTATIONS**

1 Kg – 5 Kg – 20 Kg

* According to the criteria of the acting veterinarian.
